

Salmonid Species

- [Atlantic salmon \(*Salmo salar*\)](#)
- [Arctic char \(*Salvelinus alpinus*\)](#)

Atlantic Salmon (*Salmo salar*)

Farmed Arctic Salmon from Iceland is one of the best, and as close to wild Atlantic salmon as can be. The Salmon is farmed at low density in pollution free waters, chemical free, meaning no medicines or delouse chemical agents. There are very strict standards in terms of feed content and the feed is GMO free. After harvesting of each generation, each farming zone is allowed to rest and clear naturally. The farming was the first one in Europe to get Best Aquaculture Practices certification, which focuses primarily on sustainability and traceability. They are also in process of getting aquaculture Stewardship Council certification, ASC.

Main catching seasons: all year round

Specification:

- HOG → IQF

- Frozen at land

Arctic Char (*Salvelinus alpinus*)

Iceland is the largest producer of Arctic char in the world and it is farmed using sustainable, geothermal energy. Arctic char grown in clean waters is free of growth hormones, antibiotics and GMOs. California's Monterey Bay Aquarium Seafood Watch and Ocean Wise rate Icelandic Arctic char as a best choice for seafood purchases that support healthy oceans.

Main catching seasons: all year round

Specification:

- W/R → IQF | Block frozen
- Fillets → IQF
- Frozen at land
